

TDWG Technical Architecture Group (TAG)

Online Meeting — 2024-06-27

Logistics

Meeting Date and Time: 2024-06-27

Zoom Link: <https://us02web.zoom.us/j/81744510317>

TAG GitHub Repo: <https://github.com/tdwg/tag>

Attendees

- Ben Norton
- Steve Baskauf
- Stan Blum
- James Macklin
- Dave Bloom
- Elirik Rindal
- Sam Leeflang
- Matt Woodburn
- Laurence Livermore
- Dagmar Triebel
- Elspeth Haston
- Mathias Dillen
- John Kunze
- Kit Lewers
- Cecille Svenningsen
- John Wieczorek
- Cat Chapman

Regrets: Raissa Meyer

Agenda

- MIDS
- StaDocGen (if time permits)

Notes

MIDS Introduction

Draft Development Specification: <https://docs.google.com/document/d/1mc9sf8X8l8iSc-GO2ZFmgCoOiJNxKRhYeGq5OFmsfw8/edit>

Purposes:

- Aids institutions prioritize data publishing activities
- Provides a standardized metric for assessing the scale of digitization activities
- MIDS does not provide a metric for assessing data quality
- Information Elements spreadsheet linked in resources

Several questions were raised regarding the structure and nature of MIDS (specification vs. a standard) and how this fits within TDWG. Discussion moved to mappings to address the questions.

MIDS Calculator

- 1. MIDS is a cumulative standard.
- 2. Calculates a score for each record in a Darwin Core archive and provides charts for visual representation.
- 3. SSSOM Mappings include more than SKOS mappings and provide a good overview of how MIDS works. It includes more than just the set of SKOS mapping properties (owl:intersectionOf).
- 4. Several implementations exist now or are actively under development.
- 5. TAPIR is an existing TDWG specification with a similar function/structure. NOTE: TAPIR was ratified prior to the Standards Documentation Specification so it does not conform to the SDS.
- 6. Alternative process for specifications using criteria evaluating whether the standard can be readily used to design a tool.
- 7. MIDS does not specify how results should be presented.
- 8. GBIF Issue regarding MIDS: <https://github.com/gbif/pipelines/issues/807>
- 9. MIDS was designed for published datasets which facilitates use of DWC or ABCD as the mapping schema for calculating MIDS scores. MIDS does not specify that DWC or ABCD is required.
- 10. Recommendation to include a method/procedure for publishing the SSSOM mappings used in a MIDS calculation for reproducibility.
- 11. Possible implications as a framework for assessing data quality based on presence/absence.
